

How VoIP Works

VoIP converts the voice signal from your telephone into a digital signal that travels over the Internet, then converts it back at the other end so you can speak to anyone with a regular telephone number.

When placing a VoIP call using your existing phone system with an adapter or a new VoIP phone system, you hear a dial tone and dial just as you always have.

WaveStream VoIP is the product name for the Business Class VoIP services offered exclusively by SolutionsITC. We have been providing hardware, software and networking support/services to the business community for many years. At the request of our existing customer base, we spent over a year of research and development bringing this cutting edge technology to the market and now provide this communications solution exclusively to businesses in the Upper Cumberland and nationwide.

Solutions IT Consulting has been serving businesses for over 10 years—call us at (931) 528-9010 for more information.
