What is Cloud Computing and how does it affect my business?

Cloud computing is a model for enabling convenient, on-demand network access to a shared pool of configurable computing resources. In simple terms, it is a way for you to have access to the software you need to run your business in a secure and efficient way. Instead of having a server onsite in your office that is not only expensive but also requires maintenance, you rent space in our cloud of computers to store and run your shared applications. You connect to the cloud securely to run your software anywhere you have an Internet connection.

Here are a list of just a few of the benefits of this amazing service:

SECURITY

- All of your data is stored in our state of the art Network Operation Center
- Added Protection from Fire, Storms, Theft
- Automatic backup of your data to redundant locations
- Redundancy of Hardware, Power, Internet connections
- High grade encryption of data via 128bit 3DES protocols
- Protection from data corruption due to terminal connections

COST SAVINGS

- Level Monthly Billing, no surprises, makes budgeting easier
- No longer do you have to pay for server and user licenses
- Backup is INCLUDED and not an extra expense
- Large reduction of hardware cost for your onsite systems
- Reduction of your onsite maintenance expenses
